

### Lesson 19 Review Answers

|                | Description  | How the Nile changes here  | Drawing |
|----------------|--|--|---------|
| Lake Victoria  | Large, shallow lake  | Main source of the White Nile  |         |
| As Sudd        | HUGE swamp   | The white Nile spreads into many small channels  |         |
| Lake Tana      | Lake formed by runoff from Etheopian hills                                 | This lake feeds the Blue Nile  |         |
| Aswan High Dam | Dam built for Hydroelectric potential and to control the flow of the river | Lake nasser is a reservoir formed from the dam.  |         |
| Arid Landscape | Nile running through a desert  | Nile provides trees and small plots for irrigation   |         |
| Great Bend     | BIG Turn in the river  | This makes a wide turn to south and west   |         |
| khartoum       | Capital Of Sudan   | Where the Nile branches come together  |         |
| Farmland       | Farmland On the Nile River Valley  | Allows crops to grow   |         |
| Nile Delta     | Broad, Triangular land at the mouth of the river.                          | Silt builds up over time.It used to split into seven channels now only 2 remain. This is rich farmland |         |
| Cairo          | Capital of Egypt   | Gets its water from the river and dump sewage and industrial waste in the river                        |         |
